

Desktop applications

Web application---→ 3 tier

Web services--→ 4 tier

Mobile application

HTML(Hypertext Markup Language)

Tags are available

<h1> --- begin tag

</h1>----- end tag

<p id="myp" name="test" class="xxx">-> id, name, class these are attributes

every attribute value should be enclosed in "" or ""

Web pages are of 2 types

Static web page	If the contents of the page appear on all the machines are same	eg—Tutorial site, news site
-----------------	---	-----------------------------

	These pages can be designed by using HTML,css	
dynamic web page	<p>If the contents of the page appear on client machines are dependent on the request of the client</p> <p>HTML,CSS,Javascript, NodeJS,expressJS</p>	e.g bookmyshow.com, flipkart.com,

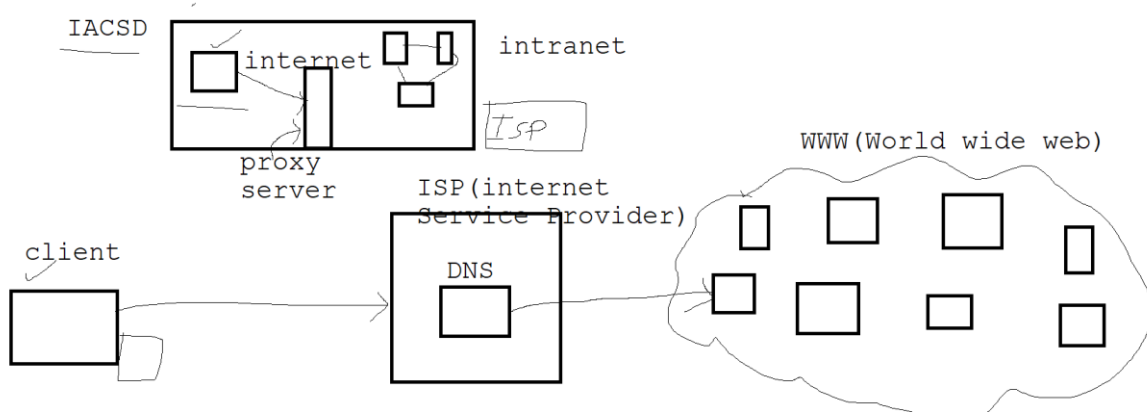

Visual studio code--→ download from the following site

<https://code.visualstudio.com/download>

To write HTML page, every file extension should be .html or .htm

URL

file:///D:/Web%20programming/IACSD%20march%2024/hello.html	
protocol://server ip:port/Hello.html	
http://127.0.0.1:5500/hello.html	

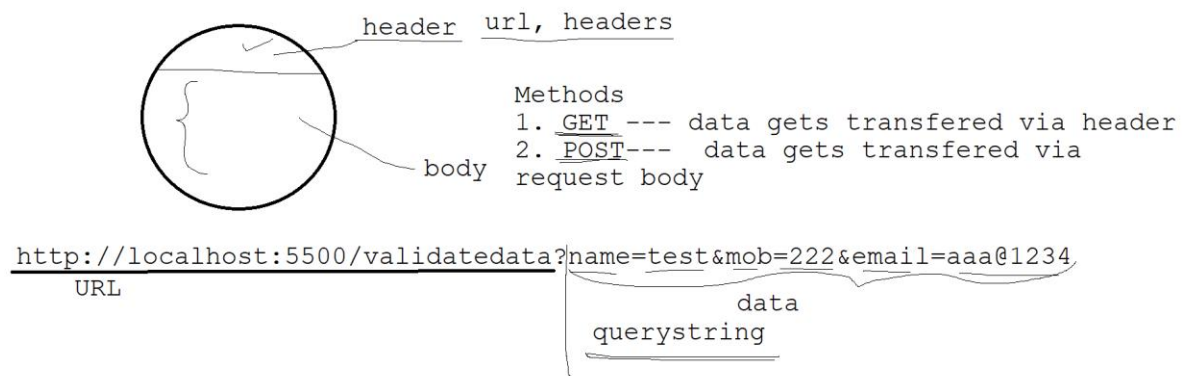

google.com --→ domain name--→ ISP--→ DNS (Domain name server)--→ it converts domain name into ip address

http→ hypertext transfer protocol, It is a set of rules which tells how 2 machines can communicate with each other

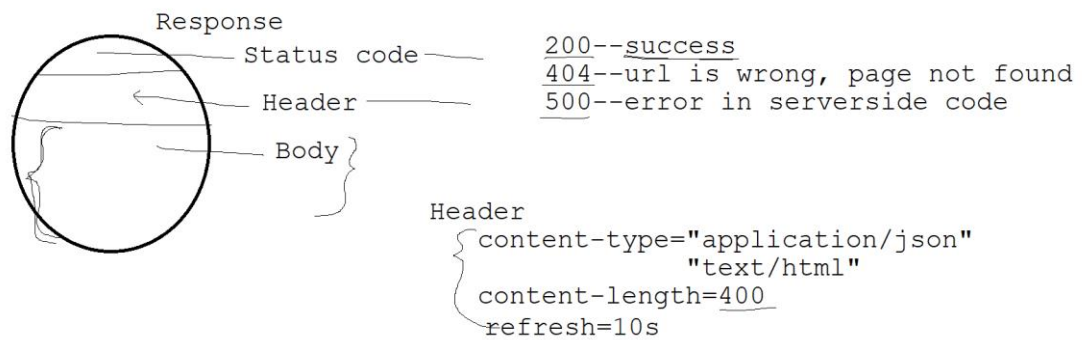

Request-→ It is a object which transfers data from client to server

Response-→ It is a object using which server transfers data to client

Request

## Response

## HTML

### HTML(Hypertext Markup Language)
